**Housekeeping/Laundry/Maintenance**

**PRE-1975:**

(d) At least one janitor’s closet shall be provided in each facility.

**1975-1990:**

(a) If linen is to be processed on the site, the following shall be provided:

1. A laundry processing room with commercial-type equipment that can process seven days’ needs within a regularly scheduled work week. Handwashing facilities shall be provided.
2. A soiled linen receiving, holding and sorting room with handwashing facilities.
3. Storage for laundry supplies.
4. A clean linen inspection and mending room or area.
5. A clean linen storage, issuing and holding room area.
6. A janitors’ closet containing a floor receptor or service sink and storage space for housekeeping equipment and supplies.
7. Sanitizing facilities and storage area for carts. The sanitizing facilities may be combined with those required for dietary facilities.

(b) If linen is processed off the site, the following shall be provided:

1. A soiled linen holding room.
2. Clean linen receiving, holding, inspection and storage room(s).
3. Sanitizing facilities and storage area for carts. The sanitizing facilities may be combined with those required for dietary facilities. General storage room(s) shall have a total area of not less than ten square feet per certified bed and shall generally be concentrated in one area.

**Title:** Section 713-2.15 - Janitors' closets

**713-2.15 Janitors' closets.**

In addition to the janitors’ closets called for in certain departments, sufficient janitors’ closets shall be provided throughout the facility to maintain a clean and sanitary environment. These shall contain a floor receptor or service sink and storage space for housekeeping equipment and supplies.

**Title:** Section 713-2.17 - Waste processing facilities and services
713-2.17 Waste processing facilities and services.

(a) Space and facilities shall be provided for the sanitary storage and disposal of waste by incineration, mechanical destruction, compaction, containerization, removal or by a combination of these techniques.

(b) A gas, electric or oil-fired incinerator shall be provided on site or by off-site shared services for the complete destruction of infectious waste. Infectious waste shall include, but shall not be limited to, dressings from open wounds, laboratory specimens, and all waste material from isolation rooms. If an incinerator is on site, it shall be located in a separate room or outdoors and shall meet the following requirements:

(1) Design and construction of incinerators and trash chutes shall be in accordance with NFPA 82, Standard on Incinerators and Waste and Linen Handling Systems and Equipment. Further details concerning this referenced material are contained in section 711.2(a) of this Title.

(2) Incinerators shall be designed and installed in accordance with the terms of the permit to construct, issued by the Department of Environmental Conservation.

1990-2010:

(5) A clean workroom with a work counter sized to store clean and sterile supplies as required by the functional program, or a clean holding facility that is part of an approved system for storage and distribution of clean and sterile supply materials. The location(s) of the clean workroom and the clean holding facility shall be based on the functional program and physical layout of the nursing unit.

(6) A soiled workroom that contains a clinical sink or equivalent, flushing rim fixture with a rinsing hose or a bed pan sanitizer, handwashing facilities, work counter, and an area for soiled linen holding and waste receptacle(s) in a number and type as required by the functional program. The location of the soiled workroom shall be based on the functional program and the physical layout of the nursing unit. A soiled holding facility, if not provided within the workroom, shall be part of an approved system for collection and disposal of soiled materials.

(7) A closet, designated area within the clean workroom or a closed cart system for clean linen storage. If a closed cart system is used, storage may be in an alcove.

Title: Section 713-3.15 - Linen services

(a) If linen is to be processed on the site, the following shall be provided:

(1) A laundry processing room with commercial type equipment that can process seven days’ needs within a regularly scheduled workweek. Handwashing facilities shall be provided.

(2) A soiled linen receiving, holding and sorting room with handwashing facilities.

(3) Storage for laundry supplies.

(4) Clean linen inspection, storage and issuing room(s).
(5) A janitors’ closet containing a floor receptor or service sink and storage space for housekeeping equipment and supplies.

(6) Sanitizing facilities and storage area for carts. The sanitizing facilities may be combined with those required for dietary facilities.

(b) If linen is processed off the site, the following shall be provided:

(1) A soiled linen holding room.

(2) Clean linen receiving, holding, inspection and storage room(s).

(3) Sanitizing facilities and storage area for carts. The sanitizing facilities may be combined with those required for dietary facilities.

**Title:** Section 713-3.18 - Janitors’ closets

In addition to the janitors’ closets called for in certain departments, sufficient janitors’ closets shall be provided throughout the facility to maintain a clean and sanitary environment. These shall contain a floor receptor or service sink and storage space for housekeeping equipment and supplies.

**Title:** Section 713-3.20 - Waste processing services, storage and treatment Space and facilities shall be provided for waste storage and removal. Where on-site treatment is by incineration, or other approved method, appropriate additional space and facilities shall be provided.

**1975-1990:**

**Title:** Section 713-2.3 - Minimum bed capacities

713-2.3 Minimum bed capacities.

Unless the commissioner approves fewer beds, a nursing home unit of a hospital shall have a minimum of thirty certified beds and a freestanding nursing home facility shall have a minimum of sixty certified beds.

**Title:** Section 713-2.4 - Space and area requirements

713-2.4 Space and area requirements.

The commissioner may approve modifications or deletions in space requirements set forth in this Subpart when nursing home services or facilities are permitted to be shared. The sizes of the various departments will depend upon program requirements and organization of services within the facility. Some functions requiring separate spaces or rooms may be combined, provided that the resulting plan will not compromise the best standards of safety and of medical and nursing practices.

**Title:** Section 713-2.5 - Nursing units

713-2.5 Nursing units.
(a) The number of certified beds on a nursing unit shall not exceed sixty unless additional services are provided. At least two-thirds of the total certified beds in any facility shall be located in rooms designed for one or two beds. At least one-tenth of the total certified beds in any facility shall be located in single bedrooms, each equipped with a private bath and toilet.

**Staff Area**

**PRE-1975:**

(a) Office space shall be provided as required by the size of the facility, and the number of persons employed in administrative positions, to be used for business transactions, medical records and administration and admitting and discharge. Space shall also be provided for use by the director of nursing services. At least one toilet and lavatory shall be provided for staff and public use.

(c) Facilities with long term ventilator programs shall provide the following service areas:

(1) a conference room for in-service education and training of respiratory care staff;

**1975-1990:**

(c) The following service areas shall be located in or be readily available to each nursing unit:

(2) A lounge and toilet room(s) for nursing staff.

(3) Individual closets or compartments for the safekeeping of coats and personal effects of nursing personnel. These shall be located convenient to the duty station of personnel or in a central location. Administration and public areas shall include and comply with the following:

(a) An entrance at grade level, sheltered from the weather and able to accommodate wheelchairs.

(b) A lobby, which shall include:

(1) storage space for wheelchairs;

(2) a reception and information counter or desk;

(3) waiting space(s);

(4) public toilet facilities;

(5) public telephone(s); and

(6) drinking fountain(s).

(c) Interview space(s) for private interviews relating to social services, credit and admissions.

(d) General or individual office(s) for business transactions, medical and financial records, and administrative and professional staff.

(e) A multi-purpose room for conferences, meetings and health education purposes including facilities for showing visual aids.

(f) Storage for office equipment and supplies
In addition to employees’ facilities such as locker rooms, lounges, toilets or shower facilities called for in certain departments, a sufficient number of such facilities as required to accommodate the needs of all personnel and volunteers shall be provided.

(c) Facilities with long term ventilator programs shall provide the following service areas:

(1) a conference room for in-service education and training of respiratory care staff;

1990-2010:

The following service areas shall be provided:

(1) A staff work station with space for carrying out the administrative functions of the unit.
(2) Lounge and toilet room(s) for staff.
(3) Individual closets or lockers for the safekeeping of coats and personal effects of staff. These shall be located convenient to the duty station of personnel or in a central location.

(b) The following service areas shall be readily available:

(1) a conference room for in-service education and training of respiratory care staff;

Title: Section 713-3.14 - Administration and public areas

Administration and public areas shall include and comply with the following:

(a) A main entrance at grade level sheltered from the weather that can accommodate wheelchairs.
(b) A lobby, which shall include:

(1) a reception and information counter or desk;
(2) waiting space(s) with seating areas;
(3) public toilet facilities, which are wheelchair accessible;
(4) public telephone(s);
(5) drinking fountain(s); and
(6) a bulletin board.
(c) Interview space(s) for private interviews relating to social services, credit arrangements and admissions.
(d) General or individual office(s) for business transactions, medical and financial records, and administrative and professional staff.
(e) A multi-purpose room for conferences, meetings and health education purposes, including facilities for showing visual aids.
(f) Storage for office equipment and supplies.
(g) An equipped clinical nurses aide training facility if the nursing home provides training support or a training program for nurses aides.

**Title:** Section 713-3.17 - Employees' facilities

713-3.17 Employees' facilities. In addition to employees' facilities such as locker rooms, lounges, toilets or shower facilities called for in certain departments, a sufficient number of such facilities as are required to accommodate the needs of all personnel and volunteers shall be provided. An outdoor smoking area shall be designated.

**Corridors, Floors, and Signage**

**PRE-1975:**

(a) Corridors used by residents shall be equipped with firmly secured handrails on both sides.

(c) All floor, ceiling and wall surfaces shall be easily cleanable, and designed for the maintenance of a comfortable, sanitary environment for each resident. This shall not apply to ceilings in boiler rooms, mechanical and building equipment rooms, administration and similar spaces that are not typically occupied by residents.

**1975-1990:**

**Title:** Section 713-2.18 - Details and finishes

A high degree of safety for the occupants shall be provided to minimize the incidence of accidents with special consideration for ambulatory residents to enhance their ability to care for themselves. Hazards such as sharp corners shall be avoided.

(a) Details shall comply with the following requirements:

(1) Compartmentation, corridors, widths, exits, automatic extinguishment systems, and other details relating to fire prevention and fire protection shall comply with requirements applicable to existing health care occupancies set forth in NFPA 101, Life Safety Code, 2000 edition. Further details concerning this referenced material are contained in section 711.2(a) of this Title.

(2) Items such as drinking fountains, telephone booths, vending machines, and portable equipment shall be located so as not to restrict corridor traffic or reduce the corridor width below the required minimum.

(4) The minimum width of all doors to rooms needing access for beds or stretchers shall be three feet eight inches. Doors to resident toilet rooms and other rooms needing access for wheelchairs shall have a minimum width of two feet ten inches.

(5) Doors on all openings between corridors and rooms or spaces subject to occupancy, except elevator doors, shall be swing type. Openings to showers, baths, residents' toilets, and other small wet-type areas not subject to fire hazard are exempt from this requirement.

(6) Windows and other doors which may be frequently left in an open position shall be provided with insect screens.
(7) Windows shall be designed to prevent accidental falls when open, or shall be provided with security screens.

(8) Except for doors to spaces that are not subject to occupancy such as small closets, all doors shall not swing into corridors in a manner that might obstruct traffic flow or reduce the required corridor width. Large walk-in type closets are considered spaces subject to occupancy.

(9) Doors, sidelights, borrowed lights, and windows in which the glazing extends down to within eighteen inches of the floor, thereby creating possibility of accidental breakage by pedestrian traffic, shall be glazed with safety glass, wire glass, or plastic glazing material that will resist breaking and will not create dangerous cutting edges when broken. Similar materials shall be used in wall openings of recreation rooms and exercise rooms unless required otherwise for fire safety. Glazing materials as noted above shall be used for shower doors and bath enclosures.

(10) Where labeled fire doors are required, these shall be certified by an independent testing laboratory as meeting the construction requirements equal to those for fire doors in NFPA 80, Standard for Fire Doors and Fire Windows, 1999 edition. Reference to a labeled door shall be construed to include labeled frame and hardware. Further details concerning the material referenced herein are contained in section 711.2(a) of this Title.

(11) Elevator shaft openings shall have Class B 1-1/2-hour labeled fire doors.

(12) Linen and refuse chutes shall meet or exceed the following requirements:

(i) Service openings to chutes shall not be located in corridors or passageways but shall be located in a room of construction having a fire resistance of not less than two hours. Doors to such rooms shall be not less than Class B 1-1/2-hour labeled fire doors.

(ii) Service openings to chutes shall be approved self-closing Class B 1-1/2-hour labeled fire doors.

(iii) Minimum cross-sectional dimension of gravity chutes shall be not less than two feet.

(iv) Chutes shall discharge directly into collection rooms separate from incinerators, laundry, or other services. Separate collection rooms shall be provided for trash and for linen. The enclosure construction for such rooms shall have a fire resistance of not less than two hours, and the doors thereto shall be not less than Class B 1-1/2 fire doors.

(v) Gravity chutes shall extend through the roof with provisions for continuous ventilation as well as for fire and smoke ventilation. Openings for fire and smoke ventilation shall have an effective area of not less than four feet above the roof and not less than six feet clear of other vertical surfaces. Fire and smoke ventilating openings may be covered with single strength sheet glass.

(13) Dumbwaiters, conveyors and material handling systems shall not open directly into a corridor or exit way but shall open into a room enclosed by construction having a fire resistance of not less than one hour and provided with Class C 3/4 labeled fire doors. Service entrance doors to vertical shafts containing dumbwaiters, conveyors, and material handling systems shall be not less than Class B 1-1/2-hour labeled fire doors. Where horizontal conveyors and material handling systems penetrate fire-rated walls or smoke partitions, such openings must be provided with Class B 1-1/2-hour labeled fire doors for two hour walls and Class C 3/4-hour labeled fire doors for one hour walls or partitions.
(14) Thresholds and expansion joint covers shall be made flush with the floor surface to facilitate use of wheelchairs and carts.

(17) Handrails for use by residents shall be provided on both sides of corridors. A clear distance of one and a half inches shall be provided between the handrail and the wall.

(18) Ends of handrails and grab bars shall be constructed to prevent snagging the clothes of residents.

(22) Ceiling heights shall be as follows:

(i) Boiler rooms shall have ceiling clearances not less than two feet six inches above the main boiler header and connecting piping.

(ii) Rooms containing ceiling-mounted equipment shall have height required to accommodate the equipment.

(iii) All other rooms shall have not less than eight foot ceilings except that corridors, storage rooms, toilet rooms, and other minor rooms may be not less than seven feet eight inches. Suspended tracks, rails and pipes located in path of normal traffic shall be not less than six feet eight inches above the floor.

(b) Finishes shall comply with the following:

(1) Cubicle curtains and draperies shall be noncombustible and shall pass both the large and small scale test of set forth in NFPA 701, Standard Methods of Fire Tests for Flame Propagation of Textiles and Films, 1999 edition. Further details concerning this material referenced herein are contained in section 711.2(a) of this Title.

(2) Floor materials shall be easily cleanable and have wear resistance appropriate for the location involved. Floors in areas used for food preparation or food assembly shall be water-resistant and greaseproof. Joints in tile and similar material in such areas shall be resistant to food acids. In all areas frequently subject to wet cleaning methods, floor materials shall not be physically affected by germicidal and cleaning solutions. Floors that are subject to traffic while wet, such as shower and bath areas, kitchen and similar work areas, shall have a nonslip surface.

(3) Wall bases in kitchen, soiled workrooms, and other areas which are frequently subject to wet cleaning methods shall be made integral and coved with the floor, tightly sealed within the wall, and constructed without voids that can harbor insects.

(4) Wall finishes shall be washable and the immediate area surrounding plumbing fixtures shall be smooth and moisture resistant. Finish, trim, and wall and floor construction in dietary and food preparation areas shall be free from spaces that can harbor rodents and insects.

(5) Floor and wall penetrations by pipes, ducts and conduits shall be tightly sealed to minimize entry of rodents and insects. Joints of structural elements shall be similarly sealed.

(6) Ceilings throughout the facility shall be easily cleanable. Ceilings in the dietary and food preparation areas shall have a finished ceiling covering all overhead piping and duct work. Finished ceilings may be omitted in mechanical and equipment spaces, shops, general storage areas, and similar spaces, unless required for fire-resistive purposes.
(7) Acoustical ceilings shall be provided for corridors in resident areas, nurses’ stations dayrooms, recreation rooms, dining areas and waiting areas.

1990-2010:

Administration and public areas shall include and comply with the following:

(b) A lobby, which shall include:

(6) a bulletin board.

Title: Section 713-3.21 - Details and finishes

713-3.21 Details and finishes.

(a) All details shall comply with the following requirements:

(1) Compartmentation, corridors widths, exits, automatic extinguishment systems, and other details relating to fire prevention and fire protection shall comply with requirements of NFPA 101, Life Safety Code, 2000 edition. Further details concerning this referenced material are contained in section 711.2(a) of this Title.

(2) Items such as drinking fountains, telephone booths, vending machines, and portable equipment shall be located so as not to restrict corridor traffic or reduce the corridor width below the required minimum.

(3) All rooms containing bathtubs, sitz baths, showers or water closets that are subject to use or occupancy by residents, shall be equipped with doors and hardware which will permit access from the outside in any emergency. When such rooms have only one opening or are small, the doors shall be capable of opening outwards or be otherwise designed to be opened without need to push against a resident who may have collapsed within the room.

(4) The minimum width of all openings to rooms needing access for beds or stretchers shall be three feet eight inches.

(5) Doors on all openings between corridors and rooms or spaces subject to occupancy, except elevator doors, shall be swing type. Opening to showers, baths, residents' toilets, and other small wet-type areas not subject to fire hazard are exempt from this requirement.

(6) Doors, except doors to spaces such as small closets that are not subject to occupancy, shall not swing into corridors in a manner that might obstruct traffic flow or reduce the required corridor width. Large walk-in type closets are considered spaces subject to occupancy.

(7) Doors, sidelights, borrowed lights, and windows in which the glazing extends down to within eighteen inches of the floor, thereby creating possibility of accidental breakage by pedestrian traffic, shall be glazed with safety glass, wire glass, or plastic glazing material that will resist breaking and will not create dangerous cutting edges when broken. Similar materials shall be used in wall openings of recreation rooms and exercise rooms unless required otherwise for fire safety. Glazing materials as noted above shall be used for shower doors and bath enclosures.
(8) Thresholds and expansion joint covers shall be made flush with the floor surface to facilitate use of wheelchairs and carts.

(9) Grab bars shall be provided for all residents’ showers, tubs and sitz baths. All grab bars shall have sufficient strength and anchorage to sustain a concentrated load of two hundred fifty pounds.

(10) Recessed soap dishes shall be provided in showers and bathrooms.

(11) Handrails for use by residents shall be provided on both sides of corridors. A clear distance of one and a half inches shall be provided between the handrail and the wall.

(12) Ends of handrail and grab bars shall be constructed to prevent snagging the clothes of residents.

(13) The location and arrangement of handwashing facilities shall permit their proper use and operation. Particular care shall be given to the clearances required for blade-type operating handles. Lavatories intended for use by residents shall be installed to permit use by residents in wheelchairs.

(14) Mirrors shall be arranged for convenient use by residents in wheelchairs as well as by residents in a standing position.

(15) Paper towel dispensers and waste receptacles shall be provided at all handwashing fixtures.

(16) Ceiling heights shall be as follows:

(i) Boiler rooms shall have ceiling clearances not less than two feet six inches above the main boiler header and connecting piping.

(ii) Rooms containing ceiling-mounted equipment shall have height required to accommodate the equipment.

(iii) All other rooms shall have not less than seven feet ten inch ceilings. Suspended tracks, rails and pipes located in path of normal traffic, including resident room vestibule ceilings, shall be not less than six feet eight inches above the floor.

(b) Finishes shall include and comply with the following:

(1) Floor materials shall be easily cleanable and have wear resistance appropriate for the location involved. Floors in areas used for food preparation or food assembly shall be water-resistant and grease-proof. Joints in tile and similar material in such areas shall be resistant to food acids. In all areas frequently subject to wet cleaning methods, floor materials shall not be physically affected by germicidal and cleaning solutions. Floors that are subject to traffic while wet, such as shower and bath areas, kitchen and similar work areas, shall have a non-slip surface.

(2) Wall bases in kitchen, soiled workrooms, and other areas which are frequently subject to wet cleaning methods shall be made integral and coved with the floor, tightly sealed within the wall, and constructed without voids that can harbor insects.
(3) Wall finishes shall be washable and, in the immediate area of plumbing fixtures, shall be smooth and moisture resistant. Finish, trim, and wall and floor construction in dietary and food preparation areas shall be free from spaces that can harbor rodents and insects.

(4) Floor and wall penetrations by pipes, ducts and conduits shall be tightly sealed to minimize entry of rodents and insects. Joints of structural elements shall be similarly sealed.

(5) Ceilings throughout the facility shall be easily cleanable. Dietary and food preparation areas shall have finished ceilings covering all overhead piping and duct work. Finished ceilings may be omitted in mechanical and equipment spaces, shops, general storage areas, and similar spaces, unless required for fire-resistive purposes.

(6) Acoustical ceilings and acoustical wall treatment, including acoustical in-wall insulation as required, shall be provided for corridors in resident areas, nurses’ stations, dayrooms, recreation rooms, dining areas and waiting areas to reduce ambient noise in resident living and sleeping areas.

Lighting, Noise, Temperature (HVAC), and Odors

PRE-1975:

(b) Nursing home facilities shall include elevators as follows:

(1) Facilities with certified resident beds or resident services on two or more floors shall provide at least one elevator.

(2) Facilities with one hundred one to two hundred certified beds above the first floor shall provide at least two elevators.

(3) Facilities with more than two hundred certified beds above the first floor shall provide at least three elevators.

(4) The minimum platform size of a single elevator, where such elevator is required, shall measure at least four feet six inches by seven feet. Where a second elevator is required by this section, its platform shall measure at least four feet by six feet.

Title: Section 713-1.9 - Mechanical requirements

713-1.9 Mechanical requirements.

(a) Boilers shall have the capacity to supply the normal requirements of all steam and hot water systems and equipment. The number and arrangement of boilers shall be such that when one boiler breaks down or when routine maintenance requires that one boiler be temporarily taken out of service, the capacity of the remaining boilers shall be at least seventy percent of the total required capacity.

(b) The heating system shall be capable of maintaining all occupied areas at a minimum temperature of seventy-five degrees Fahrenheit.

(c) Resident bedrooms shall have operable windows that can be used for ventilation.
(d) Bathing rooms, soiled workrooms, soiled linen rooms and janitors’ closets shall have mechanical exhaust ventilation or a wall or, if approved by the department, window exhaust fan with back-draft louvers.

(e) Toilet rooms and physical therapy rooms shall have mechanical exhaust or window exhaust fan with back-draft louvers or, if approved by the department, operable windows which can be used for ventilation.

(f) Kitchen areas shall have a mechanical ventilating system to maintain an equal supply and exhaust and a minimum of ten air changes per hour. Dishwashing areas shall have an exhaust system with a minimum of ten air changes per hour. If all outside air is used, a filter with at least thirty five percent efficiency shall be installed in the system. Supply air for the dishwashing area may be taken from the kitchen. All exhaust air shall be discharged directly to the outdoors.

(g) Supply air for central ventilation systems for resident care areas using outdoor air shall be equipped with filters having an efficiency of thirty five percent.

(h) Nursing homes shall include an incinerator to treat infectious wastes or other department approved methods of infectious waste disposal. Incinerators and refuse chutes shall comply with NFPA 82, Standard on Incinerators and Waste and Linen Handling Systems and Equipment, as referenced in section 711.2(a) of this Title, and shall meet the requirements for approval of the Department of Environmental Conservation.

(i) All handwashing fixtures used by medical and nursing staff and food handlers shall be trimmed with valves that can be operated without the use of hands. Hand operated faucets may be fitted on lavatories in residents’ rooms and residents’ toilets.

(j) Bedpan-flushing devices shall be provided on each resident floor.

(k) Vacuum breakers shall be installed on hose bibs and on all fixtures to which hoses or tubing can be attached, such as janitor’s sinks and bedpan-flushing attachments.

(l) Water supply systems shall be provided to supply water at sufficient pressure to operate all fixtures and equipment.

(m) Domestic hot water systems shall provide adequate hot water at each outlet at all times. Hot water temperature at fixtures used by residents shall not exceed one hundred ten degrees Fahrenheit.

(n) Building sewers shall discharge into a community sewerage system, if available, or a department approved sewage treatment system.

**Title:** Section 713-1.10 - Electrical requirements

713-1.10 Electrical requirements.

(a) Each resident bedroom shall have at least one duplex electrical receptacle per bed and an additional receptacle on another wall. If electric beds are used, an additional receptacle is required at the head of each bed. Duplex receptacles for general use shall be installed approximately fifty feet apart in all corridors.
(b) Resident rooms shall have general lighting and night lighting; a reading light shall be provided for each resident.

(c) An emergency generator shall be provided that is capable of providing energy to operate the following: lighting for all means of egress; equipment to maintain fire detection, alarm and extinguishing systems; life-support systems; water, sewage and sump pumps; refrigerators and freezers; and, minimal general lighting, and heating. In facilities with all-electric kitchens, a ratio of three duplex receptacles per nursing unit shall be provided in the kitchen for food preparation unless a prior approved emergency food preparation plan is in effect.

(d) Fire signal systems consisting of an electrically supervised fire alarm system and a detection system shall be provided as follows:

1) The fire alarm signal shall be coded to indicate location of the station operated and shall be connected to the fire department protecting the facility or to a central station. Any alarm signal in the system shall sound a general alarm audible throughout the facility.

2) A coded fire detection system that is connected to the fire alarm system of the facility shall be provided in boiler rooms and attached garages.

3) Each resident sleeping room shall be protected by an automatic smoke and heat detection system that includes an approved and operational automatic smoke and heat detector in such room. A facility with one or more resident sleeping rooms that are protected by an automatic smoke detection system, but do not have an automatic heat detection system, and otherwise complies with the requirements of this subparagraph, shall not be required to add an automatic heat detector to such system in such rooms.

1975-1990:

Title: Section 713-2.16 - Engineering service and equipment areas

713-2.16 Engineering service and equipment areas.

Engineering service and equipment areas shall include the following:

(a) equipment room(s), which shall consist of room(s) or separate building(s) for boilers, mechanical equipment and electrical equipment;

(b) engineers' quarters providing office or suitable desk space for engineers;

(c) maintenance shop(s);

(d) storage room(s) for building maintenance supplies which may be part of maintenance shop in nursing homes of less than one hundred beds; and

(e) yard equipment storage which shall consist of a separate room or building for year maintenance equipment and supplies.

(24) Rooms containing heat-producing equipment, such as boiler or heater rooms and laundries, shall be insulated and ventilated to prevent any floor surface above from exceeding a temperature ten degrees Fahrenheit above the ambient room temperature.
Title: Section 713-2.20 - Elevators

713-2.20 Elevators.

All buildings that have residents' facilities such as bedrooms, dining rooms or recreation areas, or critical services, such as diagnostic or therapy areas located on a floor other than the main entrance floor shall have electric or electrohydraulic elevators. All buildings with elevators shall comply with the requirements of this section.

(a) The facility shall have the following minimum number of elevators:

(1) At least one hospital-type elevator shall be installed where one to fifty nine resident beds are located on any floor other than the main entrance floor.

(2) At least two elevators, one of which shall be hospital-type, shall be installed where sixty to two hundred certified resident beds are located on floors other than the main entrance floor, or where the major resident services are located on a floor other than those containing certified resident beds. Elevator service may be reduced for those floors that provide only partial resident services.

(3) At least three elevators, one of which shall be hospital-type shall be installed where two hundred one to three hundred fifty certified resident beds are located on floors other than the main entrance floor, or where a major resident services are located on a floor other than those containing certified resident beds. Elevator service may be reduced for those floors that provide only partial resident services.

(4) For facilities with more than three hundred fifty certified resident beds, the number of elevators shall be determined from a study of the facility plan and the estimated vertical transportation requirements.

(b) Hospital-type elevator cars shall have inside dimensions that will accommodate a resident bed and attendants, and shall be at least five feet wide by seven feet six inches deep. The car door shall have a clear opening of not less than three feet eight inches wide.

(c) Elevators shall be equipped with an automatic leveling device of the two-way automatic maintaining type with an accuracy of one-half inch.

(d) Elevators, except freight elevators, shall be equipped with a two-way special service switch to permit cars to bypass all landing button calls and be dispatched directly to any floor.

(e) Elevator controls, alarm button and telephones shall be accessible to wheelchair occupants.

(f) Elevator call buttons, controls and door safety stops shall be of a type that will not be activated by heat or smoke.

Title: Section 713-2.21 - Mechanical systems and equipment requirements

(b) Thermal insulation and acoustical insulation (if applicable) shall be provided on the following fixtures and equipment within a nursing home facility and shall comply with the following:

(1) boilers, smoke breeching and stacks;

(2) steam supply and condensate return piping;
(3) hot water piping above one hundred eighty degrees Fahrenheit and all hot water heaters, generators and converters;

(4) hot water piping above one hundred twenty five degrees Fahrenheit, which is exposed to contact by residents;

(5) chilled water, refrigerant, other process piping and equipment operating with fluid temperatures below ambient dew point;

(6) water supply and drainage piping on which condensation may occur;

(7) air ducts and casings with outside surface temperatures below ambient dew point; and

(8) other piping, ducts, and equipment as necessary to maintain the efficiency of the system.

(9) Insulation may be omitted from hot water and steam condensate piping not subject to contact by residents when such insulation is unnecessary for preventing excessive system heat loss or excessive heat gain.

(10) Insulation, including finishes and adhesives on the exterior surfaces of ducts, pipes and equipment, shall have a flame spread rating of twenty five or less and a smoke developed rating of one hundred fifty or less as determined by an independent testing laboratory in accordance with NFPA 255, Standard Methods of Test of Surface Burning Characteristics of Building Materials, 2000 edition. Further details concerning the material referenced herein are contained in section 711.2(a) of this Title.

(11) Linings in air ducts and equipment including coatings and adhesives, and insulation on exterior surfaces of pipes and ducts in building spaces used as air supply plenums, shall have a flame spread rating of twenty five or less and a smoke developed rating of fifty or less as determined by an independent testing laboratory in accordance with NFPA 255, Standard Method of Test of Surface Burning Characteristics of Building Materials, 2000 edition. Further details concerning the material referenced herein are contained in section 711.2(a) of this Title.

(c) Steam and hot water systems shall comply with the following:

(1) Boilers shall have the capacity to supply the normal requirements of all systems and equipment. The number and arrangement of boilers shall be such that when one boiler breaks down or routine maintenance requires that one boiler be temporarily taken out of service, the capacity of the remaining boiler(s) shall be at least seventy percent of the total required capacity.

(2) Boiler feed pumps, heating circulating pumps, condensate return pumps and fuel oil pumps shall be connected and installed to provide normal and standby service.

(3) Supply and return mains and risers of cooling, heating and process steam systems shall be valved to isolate the various sections of each system. Each piece of equipment shall be valved at the supply and return ends.

(d) Heating and ventilating systems shall comply with the following:

(1) A minimum design temperature of seventy-five degrees Fahrenheit at winter design conditions shall be provided for all occupied areas.
(2) All air-supply and air-exhaust systems shall be mechanically operated. All fans serving exhaust systems shall be located at the discharge end of the system. The ventilation rates shown in Table 8 shall be considered as minimum acceptable rates and shall not be construed as precluding the use of higher ventilation rates.

(i) Outdoor air intakes shall be located as far as practical but not less than twenty five feet from exhaust outlets of ventilating systems, combustion equipment stacks, medicalsurgical vacuum systems, plumbing vent stacks, or from areas which may collect vehicular exhaust and other noxious fumes. The bottom of outdoor air intakes serving central systems shall be located as high as practical but not less than six feet above ground level, or if installed above the roof, three feet above roof level.

(ii) The ventilation systems shall be designed and balanced to provide the pressure relationship as shown in Table 8, below.

**TABLE 8**
PRESSURE RELATIONSHIPS AND VENTILATION OF CERTAIN AREAS OF NURSING HOME FACILITIES

(iii) The bottoms of ventilation openings shall be not less than three inches above the floor of any room.

(iv) Corridors shall not be used to supply air to or exhaust air from any room, except that air from corridors may be used to ventilate bathrooms, toilet rooms, janitors' closets, and small electrical or telephone closets opening directly on corridors.

(v) All central ventilation or air conditioning systems shall be equipped with filters having efficiencies no less than those specified in Table 9, below. The filter bed shall be located upstream of the air conditioning equipment, unless a prefilter is employed. In this case, the prefilter shall be upstream of the equipment and the main filter may be located further downstream.

**TABLE 9**
FILTER EFFICIENCIES FOR CENTRAL VENTILATION AND AIRCONDITIONING SYSTEMS IN NURSING HOME FACILITIES

(vi) All filter(s) efficiencies shall be average atmospheric dust spot efficiencies tested in accordance with ANSI/ASHRAE Standard 52.2-1999, Method of Testing Air-Cleaning Devices for Removal Efficiency by Particle Size, 1999 edition. Further details concerning this referenced material are contained in section 711.2(b) of this Title.

(vii) Filter frames shall be durable and carefully dimensioned and shall provide an airtight fit with the enclosing duct work. All joints between filter segments and the enclosing duct work shall be gasketed or sealed to provide seal against air leakage.

(viii) A manometer shall be installed across each filter bed serving central air systems.
(ix) Air handling duct systems shall meet the requirements of NFPA 90A, Standard for the Installation of Air Conditioning and Ventilating Systems, 1999 edition. Further details concerning the material referenced herein are contained in section 711.2(a) of this Title.

(x) Fire and smoke dampers shall be constructed, located and installed in accordance with the requirements of NFPA 90A, Standard for the Installation of Air Conditioning and Ventilating Systems, 1999 edition. Access for maintenance shall be provided at all dampers. Further details concerning the material referenced herein are contained in section 711.2(a) of this Title.

(a) Supply and exhaust ducts which pass through a required smoke barrier and through which smoke can be transferred to another area shall be provided with dampers at the barrier, controlled to close automatically to prevent flow of air or smoke in either direction when the fan, which moves the air through the duct, stops. Dampers shall be equipped with remote control reset devices except that manual reopening will be permitted if dampers are conveniently located.

(b) Return air ducts which pass through a required smoke barrier shall be provided with a damper at the barrier actuated by smoke or products of combustion (other than heat) detectors. These dampers shall be operated by the detectors used to actuate door closing devices in the smoke partition or by detectors located to sense smoke in the return air duct from the smoke zone.

(xi) Exhaust hoods in food preparation centers shall have an exhaust rate of not less than fifty cubic feet per minute per square foot of face area. Face area is defined for this purpose as the open area from the exposed perimeter of the cooking surfaces. All hoods over cooking ranges shall be equipped with grease filters, fire extinguishing systems, and heat actuated fan controls. Cleanout openings shall be provided every twenty feet in horizontal exhaust duct systems serving these hoods.

(xii) Boiler room shall be provided with sufficient outdoor air to maintain combustion rates of equipment and to limit temperature in working stations to ninety-seven degrees Fahrenheit.

(i) The material used for plumbing fixtures shall be of non-absorptive acid-resistant material.

(ii) The water supply spout for lavatories and sinks required in resident care areas shall be mounted so that its discharge point is a minimum distance of five inches above the rim of the fixture. All fixtures used by medical and nursing staff, and all lavatories used by residents and food handlers shall be trimmed with valves, which can be operated without the use of hands. Where blade handles are used for this purpose, they shall not exceed four and one-half inches in length, except that handles on clinical sinks shall be not less than six inches long.

(iii) Clinical sinks shall have an integral trap in which the upper portion of a visible trap seal provides a water surface.

(iv) Shower bases and tubs shall provide non-slip surfaces for standing residents.

(2) Water supply systems shall comply with the following:

(i) Systems shall be designed to supply water at sufficient pressure to operate all fixtures and equipment during maximum demand periods.
(ii) Each water service main, branch main, riser and branch to a group of fixtures shall be valved. Stop valves shall be provided at each fixture.

(iii) Backflow preventers (vacuum breakers) shall be installed on hose bibbs, janitors’ sinks, bedpan flushing attachments, and on all other fixtures to which hoses or tubing can be attached.

(iv) Flush valves installed on plumbing fixtures shall be of a quiet operating type, equipped with silencers.

(v) Bedpan flushing devices shall be provided in each resident toilet room.

(vi) Water distribution systems shall be arranged to provide hot water at each hot water outlet at all times. Hot water at shower, bathing and handwashing facilities shall not exceed one hundred ten degrees Fahrenheit.

(3) Hot water heaters and tanks shall comply with the following:

(i) The hot water heating system shall have sufficient capacity to supply water at the temperatures and amounts indicated below. Water temperatures shall be taken at hot water point of use or inlet to processing equipment.

(ii) Storage tank(s) shall be fabricated of corrosion-resistant metal or lined with noncorrosive material.

Use Gallons (per hour per bed)

Liters (per second per bed)

Temperature (degrees Fahrenheit)

Clinical 6-1/2 .007 110

Dietary 4 .004 180

Laundry 4-1/2 .005 180

(4) Drainage systems shall comply with the following:

(i) Insofar as is possible drainage piping shall not be installed within the ceiling, or installed in an exposed location in food preparation centers, food serving facilities, food storage areas, or other critical areas. Special precautions shall be taken to protect these areas from possible leakage or condensation from necessary overhead piping systems.

(ii) Building sewers shall discharge into a community sewage system. Where such a system is not available, a facility providing sewage treatment must conform to applicable local and State regulations.

(5) If used, nonflammable medical gas systems installations shall be in accordance with the requirements of NFPA 99, Standard for Health Care Facilities, 1999 edition. Further details concerning this referenced material are contained in section 711.2(a) of this Title.
(6) If used, clinical vacuum (suction) system installations shall be in accordance with the requirements of Compressed Gas Association, Inc. (CGA) Pamphlet E-10, Maintenance of Medical Gas and Vacuum Systems in Health Care Facilities. Further details concerning this referenced material are contained in section 711.2(b) of this Title.

**Title:** Section 713-2.22 - Electrical requirements

(a) All material including equipment, conductors, controls and signaling devices shall be installed to provide a complete electrical system with the necessary characteristics and capacity to supply the electrical facilities shown in the specifications or indicated on the plans. Materials and installation shall conform to NFPA 70, National Electrical Code, 1999 edition, and NFPA 99, Standard for Health Care Facilities. 1999 edition. Further details concerning these referenced materials are contained in section 711.2(a) of this Title. All electrical installations and systems shall be tested to show that the equipment is installed and operates as planned or specified.

(b) Circuit breakers or fusible switches that provide disconnecting means and overcurrent protection for conductors connected to switchboards and panel boards shall be enclosed or guarded to provide a deadfront type of assembly. The main switchboard shall be located in a separate enclosure accessible only to authorized persons. The switchboard shall be convenient for use, readily accessible for maintenance, clear of traffic lanes, and in a dry ventilated space free of corrosive fumes or gases. Overload protective devices shall be suitable for operating properly in ambient temperature conditions.

(c) Panel boards serving lighting and appliance circuits shall be located on the same floor as the circuits they serve. This requirement does not apply to emergency system circuits.

(d) All spaces occupied by people, machinery, equipment within buildings, approaches to buildings and parking lots shall have lighting. Residents' rooms shall have general lighting and night lighting. A reading light shall be provided for each resident. At least one light fixture for night lighting shall be switched at the entrance to each resident room. All switches for control of lighting in resident areas shall be of the quiet operating type.

(e) Receptacles (convenience outlets) shall comply with the following:

(1) Each resident room shall have duplex grounding-type receptacles as follows: one location each side of the head of each bed; one for television, if used; and one on another wall.

(2) Duplex receptacles for general use shall be installed approximately fifty feet apart in all corridors and within twenty-five feet of the ends of corridors.

(f) The electrical circuit(s) to fixed or portable equipment in hydrotherapy units shall be provided with five milliampere ground fault interrupters.

(h) Emergency electric services shall comply with the following:

(1) To provide electricity during an interruption of the normal electric supply, an emergency source of electricity shall be provided and connected to certain circuits for lighting and power.

(2) The source of this emergency electric service shall be as follows:
(i) an emergency generating set when the normal service is supplied by one or more central station transmission lines; and

(ii) an emergency generating set or a central station transmission line when the normal electric supply is generated on the premises.

(3) Emergency electric service shall be provided to the distribution systems as follows:

(i) Illumination for means of egress, exit signs and exit directional signs as required in NFPA 101, Life Safety Code, 2000 edition. Further details concerning this referenced material are contained in section 711.2(a) of this Title.

(ii) Corridor duplex receptacles in resident areas.

(iii) Nurses’ calling systems.

(iv) Equipment necessary for maintaining telephone service.

(v) Elevator service that will reach every resident floor when resident rooms are located on other than ground floor. Throwover facilities shall be provided to allow temporary operation of any elevator for release of persons who may be trapped between floors.

(vi) A fire pump, if installed.

(vii) Equipment for heating resident rooms, except where the facility is served by two or more electrical services supplied from separate generators of a utility distribution network having multiple power input sources and arranged to provide mechanical and electrical separation so that a fault between the facility and the generating sources will not likely cause an interruption of its service feeders.

(viii) General illumination and selected receptacles in the vicinity of the generator set;

(ix) Paging or speaker systems if intended for communication during emergency. Radio transceivers where installed for emergency use shall be capable of operating for at least one hour upon total failure of both normal and emergency power.

(x) Alarm systems, including fire alarms activated at manual stations, water flow alarm devices of sprinkler system if electrically operated, fire- and smoke-detecting systems, and alarms required for nonflammable medical gas systems if installed.

(4) The emergency lighting shall be in operation within ten seconds after the interruption of normal electric power supply. Emergency service to receptacles and equipment may be delayed automatic or manually connected. Receptacles connected to emergency power shall be distinctively marked. When the generator is operated by fuel, which is normally piped underground to the site from a utility distribution system, fuel storage facilities on the site will not be required.

(5) Each resident sleeping room shall be protected by an automatic smoke and heat detection system that includes an approved and operational automatic smoke and heat detector in such room. The detectors shall conform to the applicable provisions of NFPA 72, National Fire Alarm Code, 1999 edition, and shall be electrically connected to the fire alarm system. Additional information regarding this material is available in section
711.2(a) of this Title.

1990-2010:

**Title:** Section 713-3.19 - Engineering service and equipment areas

Engineering service and equipment areas shall include and comply with the following:

(a) Equipment room(s), which shall consist of room(s) or separate building(s) for boilers, mechanical equipment and electrical equipment;

(b) engineers’ quarters providing office or suitable desk space for engineer;

(c) maintenance shop(s);

(d) storage room(s) for building maintenance supplies which may be part of maintenance shop in nursing homes of less than one hundred residents; and

(e) yard equipment storage, which shall consist of a separate room or building for yard maintenance equipment and supplies.

(18) Rooms containing heat-producing equipment, such as boiler or heater rooms, and laundries, shall be insulated and ventilated to prevent any floor surface above from exceeding a temperature ten degrees Fahrenheit above the ambient room temperature.

**Title:** Section 713-3.23 - Elevators

713-3.23 Elevators.

(a) All buildings having resident facilities such as bedrooms, dining rooms, recreation areas, critical services such as diagnostic and therapy functions located on other than the main entrance floor shall have at least two electric or electrohydraulic elevators, one of which shall be of the hospital-type. Engineering studies of the facility design and location of resident service areas including an analysis of peak loads and waiting time to determine the elevator needs for handling residents, staff, the public, food, and supplies shall be submitted to the department for approval prior to the completion of design development drawings.

(1) Hospital-type elevator cars shall have inside dimensions that will accommodate a resident bed and attendants, and shall be at least five feet wide by seven feet six inches deep. The car door shall have a clear opening of not less than three feet eight inches wide.

(2) Elevators shall be equipped with an automatic leveling device of the two-way automatic maintaining type with an accuracy of one-half inch.

(3) Elevators, except freight elevators, shall be equipped with a two-way special service switch to permit cars to bypass all landing button calls and be dispatched directly to any floor.

(4) Elevator controls, alarm button and telephones shall be accessible to persons in wheelchairs.

(5) Elevator call buttons, controls and door safety stops shall be of a type that will not be activated by heat or smoke.
(b) The nursing home operator shall conduct or arrange for a third party to conduct field inspections and tests of elevators. The licensed operator of the nursing home facility shall obtain and maintain written certification that the installation meets the requirements set forth in this section and all applicable safety regulations and codes.

(c) The operation of elevators shall conform to NFPA 99, Standard for Health Care Facilities, 1999 edition, "Essential Electrical Distribution Requirements - Type II Systems". Further details concerning this referenced material are contained in section 711.2(a) of this Title.

**Title**: Section 713-3.24 - Mechanical systems and equipment

(a) Prior to completion and acceptance of the facility, all mechanical systems shall be tested, balanced and operated to demonstrate to the licensed operator or owner or his or her representative that the installation and performance of these systems conform to the requirements of the approved plans and specifications. Upon completion of the contract, the owner and licensed operator shall be furnished with a complete set of manufacturers’ operating, maintenance, and preventive maintenance instructions, parts lists with numbers and descriptions for each piece of equipment. The licensed operator shall obtain instructions on the operation of systems and equipment as required.

(b) Thermal insulation and acoustical insulation (if applicable) shall be provided on the following fixtures and equipment in the nursing home facility and shall comply with the following:

1. boilers, smoke breeching and stacks;
2. steam supply and condensate return piping;
3. hot water piping above one hundred eighty (180) degrees Fahrenheit and all hot water heaters, generators and converters;
4. hot water piping above one hundred twenty five degrees Fahrenheit which is exposed to contact by residents;
5. chilled water, refrigerant, other process piping and equipment operating with fluid temperatures below ambient dew point;
6. water supply and drainage piping on which condensation may occur;
7. air ducts and casings with outside surface temperatures below ambient dew point; and,
8. other piping, ducts, and equipment as necessary to maintain the efficiency of the system.

9. Insulation may be omitted from hot water and steam condensate piping not subject to contact by residents when such insulation is unnecessary for preventing excessive system heat loss or excessive heat gain.

(c) Steam and hot water systems shall comply with the following:

1. Boilers shall have the capacity to supply the normal requirements of all systems and equipment. Boilers shall have the capacity, based on the net ratings published by the Hydronics Institute or another generally accepted national standard approved by the commissioner, which is adequate to
assure resident safety and comfort, to supply not less than seventy percent of the normal requirements of all systems and equipment. Their number and arrangements shall accommodate facility needs despite the breakdown or routine maintenance of any one boiler. The capacity of the remaining boiler(s) shall be sufficient to provide hot water service for clinical, dietary, and resident use; steam for dietary purposes, and heating for general resident rooms. However, reserve capacity for facility space heating is not required in geographic areas where a design dry-bulb temperature of twenty five degrees Fahrenheit (minus four degrees Celsius) or more represents not less than ninety nine percent of the total hours in any one heating month.

(2) Boiler feed pumps, heating circulating pumps, condensate return pumps and fuel oil pumps shall be connected and installed to provide normal and standby service.

(3) Supply and return mains and risers of cooling, heating and process steam systems shall be valved to isolate the various sections of each system. Each piece of equipment shall be valved at the supply and return ends.

(d) Heating, cooling and ventilating systems for resident occupied areas of the facility shall comply with the following minimum standards except where other minimum standards are shown on Table 8 of this subdivision:

(1) Heating systems shall provide for a minimum temperature of seventy five degrees Fahrenheit at design temperature. Cooling systems shall be designed to permit a maximum temperature of eighty degrees Fahrenheit at design temperature.

(2) All air-supply and air-exhaust systems shall be mechanically operated. All fans serving exhaust systems shall be located at the discharge end of the system. The ventilation rates shown in Table 8 of this subdivision shall be considered as minimum acceptable rates and shall not be construed as precluding the use of higher ventilation rates provided such higher rates do not result in undesirable air velocity in resident-use areas.

(i) Outdoor air intakes shall be located as far as practical, but not less than twenty five feet, from exhaust outlets of ventilating systems, combustion equipment stacks, medicalsurgical vacuum systems, plumbing vent stacks, or from areas which may collect vehicular exhaust and other noxious fumes. The bottom of outdoor air intakes serving central systems shall be located as high as practical but not less than six feet above ground level, or if installed above the roof, three feet above roof level.

(ii) The ventilation systems shall be designed and balanced to provide the pressure relationship as shown in Table 8, below.

TABLE 8

(iii) The bottoms of ventilation openings shall be not less than three inches above the floor of any room.

(iv) Corridors shall not be used to supply air to or exhaust air from any room, except that air from corridors may be used to ventilate bathrooms, toilet rooms, janitors’ closets, and small electrical or telephone closets opening directly on corridors.

(v) All central ventilation or air conditioning systems shall be equipped with filters having efficiencies no less than those specified in Table 9 of this subdivision, below. The filter bed shall be located upstream of the air conditioning equipment, unless a prefilter is employed. In this case, the prefilter shall be upstream of the equipment and the main filter may be located further downstream.

* May be reduced to thirty five percent for all outdoor air systems.

(vi) All filter(s) efficiencies shall be average atmospheric dust spot efficiencies tested in accordance with ANSI/ASHRAE Standard 52.2-1999, Method of Testing Air-Cleaning Devices for Removal Efficiency by Particle Size, 1999 edition. Further details concerning this referenced material are contained in section 711.2(b) of this Title (a) Filter frames shall be durable and carefully dimensioned and shall provide an air-tight fit with the enclosing duct work. All joints between filter segments and the enclosing duct work shall be gasketed or sealed to provide seal against air leakage. A manometer shall be installed across each filter bed serving central air systems.

(vii) Exhaust hoods in food preparation centers shall have an exhaust rate of not less than fifty cubic feet per minute per square foot of face area. Face area is defined for this purpose as the open area from the exposed perimeter of the cooking surfaces. All hoods over cooking ranges shall be equipped with grease filters, fire extinguishing systems, and heat actuated fan controls. Cleanout openings shall be provided every twenty feet in horizontal exhaust duct systems serving these hoods.

(viii) Boiler rooms shall be provided with sufficient outdoor air to maintain combustion rates of equipment and to limit temperature in working stations to ninety seven degrees Fahrenheit.

(e) All plumbing systems and other piping systems shall be designed and installed in accordance with the requirements of the local or municipal building code authority having jurisdiction.

(1) Plumbing fixtures shall comply with the following:

(i) The material used for plumbing fixtures shall be of non-absorptive acid-resistant material.

(ii) The water supply spout for lavatories and sinks required in resident care areas shall be mounted so that its discharge point is a minimum distance of five inches above the rim of the fixture. All fixtures used by medical and nursing staff, and all lavatories used by residents and food handlers shall be trimmed with valves, which can be operated without the use of hands. Where blade handles are used for this purpose, they shall not exceed four and one-half inches in length, except that handles on clinical sinks shall be not less than six inches long.

(iii) Clinical sinks shall have an integral trap in which the upper portion of a visible trap seal provides a water surface.

(iv) Shower bases and tubs shall provide non-slip surfaces for standing residents.
(2) Water supply systems shall comply with the following:

(i) Water in sufficient quantity shall be provided that is of a quality, which conforms to Part 5 of this Title.

(ii) Systems shall be designed to supply water at sufficient pressure to operate all fixtures and equipment during maximum demand periods.

(iii) Each water service main, branch main, riser and branch to a group of fixtures shall be valved. Stop valves shall be provided at each fixture.

(iv) Backflow preventers (vacuum breakers) shall be installed on hose bibs, janitors sinks, bedpan flushing attachments, and on all other fixtures to which hoses or tubing can be attached.

(v) Flush valves installed on plumbing fixtures shall be of a quiet operating type, equipped with silencers.

(vi) Water distribution systems shall be narrated to provide hot water at each hot water outlet at all times. Hot water at shower, bathing and handwashing facilities shall not exceed one hundred ten degrees Fahrenheit.

(3) Hot water heating systems shall comply with the following:

(i) The hot water heating system shall have sufficient capacity to supply water at the temperatures and amounts indicated below. Water temperatures shall be taken at hot water point of use or inlet to processing equipment.

(ii) Storage tank(s) shall be fabricated of corrosion-resistant metal or lined with noncorrosive material.

(4) Drainage systems shall comply with the following requirements:

(i) Insofar as possible, drainage piping shall not be installed within the ceiling nor installed in an exposed location in food preparation centers, food serving facilities, food areas from possible leakage or condensation from necessary overhead piping systems.

(ii) Building sewers shall discharge into a community sewage system. Where such a system is not available, a facility providing sewage treatment must conform to applicable local and state regulations.
(5) If used, nonflammable medical gas systems installations shall be in accordance with the requirements of NFPA 99, Standard for Health Care Facilities, 1999 edition. Further details concerning this reference material are contained in section 711.2(a) of this Title.

(6) If used, clinical vacuum system installations shall be in accordance with the requirements of NFPA 99, Standard for Health Care Facilities, 1999 edition, and Compressed Gas Association Inc. (CGA) Pamphlet E-10: Maintenance of Medical Gas and Vacuum Systems in Health Care Facilities, third edition. Further details concerning these reference materials are contained in section 711.2 of this Title.

**Title:** Section 713-3.25 - Electrical Requirements

713-3.25 Electrical Requirements.

(a) All material including equipment, conductors, controls and signaling devices shall be installed to provide a complete electrical system with the necessary characteristics and capacity to supply the electrical facilities shown in the specifications or indicated on the plans. Materials and installation shall conform to NFPA 70, National Electric Code, 1999 edition and NFPA 99, Standard for Health Care Facilities, 1999 edition. Further details concerning these referenced materials are contained in section 711.2(a) of this Title. All electrical installations and systems shall be tested to show that the equipment is installed and operates as planned or specified.

(b) Circuit breakers or fusible switches that provide disconnecting means and overcurrent protection for conductors connected to switchboards and panel boards shall be enclosed or guarded to provide a deadfront type of assembly. The main switchboard shall be located in a separate enclosure accessible only to authorized persons. The switchboard shall be convenient for use, readily accessible for maintenance, clear of traffic lanes, and in a dry ventilated space free of corrosive fumes or gases. Overload protective devices shall be suitable for operating properly in ambient temperature conditions.

(c) Panel boards serving lighting and appliance circuits shall be located on the same floor as the circuits they serve. This requirement does not apply to emergency system circuits.

(d) All spaces occupied by people, machinery, equipment within buildings, approaches to buildings, and parking lots shall have lighting commensurate with intended use. Residents' rooms shall have general lighting and night lighting. A reading light shall be provided for each resident. At least one light fixture for night lighting shall be switched at the entrance to each resident room. All switches for control of lighting in resident areas shall be of the quiet operating type.

(e) Receptacles (convenience outlets) shall comply with the following:

1. Each resident room shall have duplex grounding-type receptacles as follows: one located near each side of the head of each bed; one for television if used; and one on another wall.

2. Duplex receptacles for general use shall be installed approximately fifty feet apart in all corridors and within twenty five feet of ends of corridors.

(f) The electrical circuit(s) to fixed or portable equipment in hydrotherapy units shall be provided with five milliamperе ground fault interrupters.

(g) Nurses’ calling systems shall comply with the following:
(1) In resident occupied areas, each room shall be served by at least one calling station and each resident shall be provided with a call device. Two call devices serving adjacent beds may be served by one calling station. Calls shall register with the floor staff and shall activate a visible signal in the corridor at the residents’ door, in the clean workroom, in the soiled workroom, and in the nourishment station of the nursing unit. In multicorridor nursing units, additional visible signals shall be installed at corridor intersections, in rooms containing two or more calling stations, indicating lights shall be provided at each station. Nurses’ calling systems that provide two-way voice communication shall be equipped with an indicating light at each calling station with lights, and remain lighted as long as the voice circuit is operating.

(2) A nurse’s call emergency device shall be provided for residents’ use at each residents’ toilet, bath and shower.

(3) Alternate technologies can be considered for emergency or nurse call systems. If radio frequency systems are used, consideration should be given to electromagnetic compatibility between internal and external sources. The department will consider the use of alternate technologies on a case-by-case basis and may approve the use of such technology if resident safety is assured.

(h) Emergency electric services shall comply with the following requirements:

(1) To provide electricity during an interruption of the normal electric supply, an emergency source of electricity shall be provided and connected to certain circuits for lighting and power.

(2) The source of this emergency electric service shall be as follows:

(i) an emergency generating set when the normal service is supplied by one or more central station transmission lines; and,

(ii) an emergency generating set or a central station transmission line when the normal electric supply is generated on the premises.

(3) Emergency electrical service shall be provided to the distribution systems as follows:

(i) Illumination for means of egress and for exit signs and exit directional signs as required in NFPA101, Life Safety Code, 2000 edition. Further details concerning this referenced material are contained in section 711.2(a) of this Title.

(ii) Corridor duplex receptacles in resident areas.

(iii) Nurses’ calling systems.

(iv) Equipment necessary for maintaining telephone service.

(v) Elevator service that will reach every resident floor when resident rooms are located on other than the ground floor. Throwover facilities shall be provided to allow temporary operation of any elevator for release of persons who may be trapped between floors.

(vi) A fire pump, if installed.
(vii) Equipment for heating resident rooms, except where the facility is served by two or more electrical services supplied from separate generators of a utility distribution network having multiple power input sources and arranged to provide mechanical and electrical separation so that a fault between the facility and the generating sources will not likely cause an interruption of its service feeders.

(viii) General illumination and selected receptacles in the vicinity of the generator set.

(ix) Paging or speaker systems if intended for communication during emergency. Radio transceivers where installed for emergency use shall be capable of operating for at least one hour upon total failure of both normal and emergency power.

(x) Alarm systems, including fire alarms activated at manual stations, water flow alarm devices of sprinkler system if electrically operated, fire and smoke detecting systems, and alarms required for non-flammable medical gas systems if installed.

(xi) Walk-in refrigerator and freezer.

(xii) Electric duplex outlets for all resident rooms, communal areas and service areas serving residents requiring ventilator care.

(4) The emergency lighting shall be in operation within ten seconds after the interruption of normal electric power supply. Emergency service to receptacles and equipment may be delayed automatic or manually connected. Receptacles connected to emergency power shall be distinctively marked. When the generator is operated by fuel, which is normally piped underground to the site from a utility distribution system, fuel storage facilities on the site will not be required.

(5) Each resident sleeping room shall be protected by an automatic smoke and heat detection system which includes an approved and operational automatic smoke and heat detector in such room. The detector shall conform to the applicable provisions of NFPA 72, National Fire Alarm Code, 1999 edition. Further details concerning this referenced material are contained in section 711.2(a) of this Title.

Amenities

1990-2010:

(14) A minimum of one telephone per nursing unit shall be provided for residents' use. The telephone shall be wheelchair accessible and located to assure privacy of conversation.

Title: Section 713-3.12 - Hair and grooming areas

713-3.12 Hair and grooming areas.

Separate room(s) shall be provided for hair care and grooming needs of residents. The space and equipment provided shall be commensurate with the number of residents within the facility. At least one sink for staff handwashing shall be provided that is trimmed with valves that are operable without the use of hands. There shall be another sink that may be used to wash hair. Resident toilets shall be readily accessible to the hair and grooming area(s).

Outdoor Area
New Construction: Facility-Wide

Title: Section 713-2.19 - Construction, including fire-resistive requirements

713-2.19 Construction, including fire-resistive requirements.

(a) Every building and every portion thereof shall be designed and constructed to sustain all dead and live load in accordance with accepted engineering practices and standards, including seismic forces, where they apply.

(b) Foundations shall rest on natural solid bearing if a satisfactory bearing is available at reasonable depths. Proper soil-bearing values shall be established in accordance with recognized standards. If solid bearing is not encountered at practical depths, the structure shall be supported on driven piles or drilled piers designed to support the intended load without detrimental settlement, except that one-story buildings may rest on a fill designed by a soils engineer. When engineered fill is used, site preparation and placement of fill shall be done under the direct full-time supervision of the soils engineer. The soils engineer shall issue a final report on the compacted fill operation and certification of compliance with the job specifications. All footings shall extend to a depth not less than one foot below the estimated maximum frost line.

(c) Construction standards for nursing home facilities shall comply with the following:

1) One-story buildings shall be of Type I, or Type II (222) or (111) construction; buildings with two or more stories shall be of Type I construction. Building construction types shall be as defined in NFPA 220, Standard on Types of Building Construction, 1999 edition. Further details concerning the material referenced herein are contained in section 711.2(a) of this Title.

2) Enclosures for stairs, elevator shafts, chutes and other vertical shafts, boiler rooms, and storage rooms of one hundred square feet or greater area, shall be of construction having a fire resistance rating of at least two hours.

(d) Separate freestanding buildings housing the boiler plant, laundry, shops, or general storage may be of Type I, or Type II (222) or (111) construction. Building construction types shall be as defined in NFPA 220, Standard on Types of Building Construction, 1999 edition. Further details concerning the material referenced herein are contained in section 711.2(a) of this Title.

(e) Building insulation materials, unless sealed on all sides and edges, shall have a flame spread rating of twenty five or less and a smoke developed rating of one hundred fifty or less when tested in accordance with NFPA 255, Standard Method of Test of Surface Burning Characteristics of Building Materials, 2000 edition. Further details concerning the material referenced herein are contained in section 711.2(a) of this Title.

(f) An emergency radio communication system shall be provided in each facility. This system shall be self-sufficient in times of emergency and capable of operation without reliance on the building service or emergency electric power supply. It shall also be linked with the available community or State emergency communication network, including connections with police and fire department or system.

1990-2010:
Title: Section 713-3.22 - Construction, including fire-resistive requirements

713-3.22 Construction, including fire-resistive requirements.

(a) Every building and every portion thereof shall be designed and constructed to sustain all dead and live loads in accordance with accepted engineering practices and standards, including seismic forces where they apply.

(b) Foundations shall rest on natural solid bearing if a satisfactory bearing is available at reasonable depths. Proper soil-bearing values shall be established in accordance with recognized standards. If solid bearing is not encountered at practical depths, the structure shall be supported on driven piles or drilled piers designed to support the intended load without detrimental settlement, except that one-story buildings may rest on a fill designed by a soils engineer. When engineered fill is used, site preparation and placement of fill shall be done under the direct full-time supervision of the soils engineer. The soils engineer shall issue a final report on the compacted fill operation and certification of compliance with the job specifications. All footings shall extend to a depth not less than one foot below the estimated maximum frost line.

(c) An emergency radio communication system shall be provided in each facility. This system shall be self-sufficient in time of emergency and capable of operation without reliance on the building service or emergency electric power supply. It shall also be linked with the available community or State emergency communication network, including connections with police and fire department or system.

Post-2010:

Title: Section 713-4.10 - Details and finishes

713-4.10 Details and finishes.

(a) Doors to all rooms containing bathtubs, sitz baths, showers and toilets for resident use shall be hinged or sliding. When such rooms have only one opening, the door shall be designed to be opened without need to push against a resident who may have collapsed within the room.

(b) The minimum width of all openings to rooms needing access for beds or stretchers shall be at minimum three feet eight inches.

(c) Floors in wet areas, such as bathing/shower facilities, shall be pitched to floor drains to prevent any run-off to areas outside the room.

(d) Acoustical treatment shall be provided between corridors in resident areas, nurse's stations, dayrooms, recreation rooms, dining areas and waiting areas and resident rooms to reduce ambient noise in resident living and sleeping areas. The STC (Sound Transmission Classification) between those spaces shall not be less than fifty-one and the NRC (Noise Reduction Coefficient) shall not be less than sixty-five for ceilings in those spaces.
