The facility must establish and maintain an infection control program designed to provide a safe, sanitary, and comfortable environment and to help prevent the development and transmission of disease and infection.

(1) Infection control program. The facility must establish an infection control program under which it:

   (A) investigates, controls, and prevents infections in the facility;

   (B) decides what procedures, such as isolation, should be applied to an individual resident; and

   (C) maintains a record of incidents and corrective actions related to infections.

(2) Preventing spread of infection.

   (A) When the infection control program determines that a resident needs isolation to prevent the spread of infection, the facility must isolate the resident. Residents with communicable disease must be provided acceptable accommodations according to current practices and policies for infection control. See §19.1(b)(4)(I) of this title (relating to Basis and Scope) for information concerning the Centers for Disease Control Guidelines publications.

   (B) The facility must prohibit employees with a communicable disease or infected skin lesions from direct contact with residents or their food, if direct contact will transmit the disease.

   (C) The facility must require staff to wash their hands after each direct resident contact for which handwashing is indicated by accepted professional practice.

   (D) The name of any resident with a reportable disease as specified in 25 Texas Administrative Code §§97.1-97.11 (relating to Control of Communicable Diseases) must be reported immediately to the city health officer, county health officer, or health unit director having jurisdiction, and appropriate infection control procedures must be implemented as directed by the local health authority.

   (E) The facility must have written policies for the control of communicable diseases in employees and residents and must maintain evidence of compliance with local and/or state health codes or ordinances regarding employee and resident health status.

   (i) Tuberculosis.

   (I) The facility must screen all employees for tuberculosis within two weeks of employment and annually, according to Center for Disease Control (CDC) guidelines. All persons providing services under an outside...
resource contract must, upon request of the nursing facility, provide evidence of compliance with this requirement.

(II) All residents should be screened upon admission and after exposure to tuberculosis, in accordance with the attending physician's recommendations and CDC guidelines.

(ii) Hepatitis B.

(I) The facility's policy regarding hepatitis B vaccinations must address all circumstances warranting these vaccinations and identify employees at risk of directly contacting blood or potentially infectious materials.

(II) All these employees must be offered hepatitis B vaccinations within 10 days of employment. If the employee initially declines hepatitis B vaccination but at a later date, while still at risk of directly contacting blood or potentially infectious materials, decides to accept the vaccination, the facility must make the vaccination available at that time.

(3) Vaccinations. Facilities are required to offer vaccinations in accordance with an immunization schedule adopted by the Texas Department of Health.

(A) Pneumococcal vaccine for residents. The facility must offer pneumococcal vaccination to all residents 65 years of age or older who have not received this immunization and to residents younger than 65 years of age, who have not received this vaccine, but are candidates for vaccination because of chronic illness. Pneumococcal vaccine must be offered both to residents who currently reside in the facility and to new residents upon admission. Vaccination must be completed unless the vaccine is medically contraindicated by a physician or the resident refuses the vaccine. Vaccine administration must be in accordance with the recommendations of the Advisory Committee on Immunization Practices of the Centers for Disease Control and Prevention at the time of the vaccination.

(B) Influenza vaccinations for residents and employees. The facility must offer influenza vaccine to residents and employees in contact with residents, unless the vaccine is medically contraindicated by a physician or the employee or resident has refused the vaccine.

(i) Influenza vaccinations for all residents and employees in contact with residents must be completed by November 30 of each year. Employees hired or residents admitted after this date and during the influenza season (through February of each year) must receive influenza vaccinations, unless medically contraindicated by a physician or the employee or resident refuses the vaccine.

(ii) Vaccine administration must be in accordance with the recommendations of the Advisory Committee on Immunization Practices of the Centers for Disease Control and Prevention at the time of the most recent vaccination.

(C) Documentation of receipt or refusal of vaccination. Immunization records must be maintained for each employee in contact with residents and must show the date of the receipt or refusal of each annual influenza vaccination. The medical record for each resident must show the date of the receipt or refusal of the annual influenza vaccination and the pneumococcal vaccine.

(4) Linens. Personnel must handle, store, process, and transport linens so as to prevent the spread of infection.
(5) The Quality Assessment and Assurance Committee as described in §19.1917 of this title (relating to Quality Assessment and Assurance) will monitor the infection control program.
